

Develop **Project Requirements** that are Clear, Complete, Concise and Consistent
...and Ensure that Projects will have Outcomes that are Aligned with Business Goals.

The Requirements Engineering Team at a leading health care company was the subject of negative feedback from upstream and downstream requirements stakeholders. Leveraging Technology led the team through a process that identified and corrected the underlying problems. The client's team is now equipped with standard tools and methodologies to deliver high quality requirements quickly. Downstream consumers of requirements deliverables can consistently interpret artifacts within the deliverables to lessen the time for design, development and implementation of solutions -- and deliver a product more closely aligned to what the business anticipates.

Requirements Development Training from Leveraging Technology

Full-day introductory class and half-day advanced class.

- Training is based on decades of collective staff experience in requirements engineering.
- First-hand experience with projects and deliverables in multiple industries: healthcare, financial services, food service, manufacturing, aerospace and defense, non-profit and government agencies.
- We've trained dozens of analysts to create effective project requirements using our proven methodologies.

Introductory Class Covers the breadth of requirements development	Advanced Class: Dive into greater detail on specific requirements topics
<ul style="list-style-type: none"> <input checked="" type="checkbox"/> How to understand requirements and where they fit in the lifecycle <input checked="" type="checkbox"/> The various types of requirements and how to use them <input checked="" type="checkbox"/> Trusted methods for developing requirements <input checked="" type="checkbox"/> How to create a high quality set of requirements 	<ul style="list-style-type: none"> <input checked="" type="checkbox"/> Use Cases <input checked="" type="checkbox"/> Information Modeling <input checked="" type="checkbox"/> Decision Modeling <input checked="" type="checkbox"/> Process Modeling for Requirements <input checked="" type="checkbox"/> Requirements Management <input checked="" type="checkbox"/> Facilitation Training

- Classes designed for 8-12 participants
- Students receive .pdf copy of the presentation and quick reference guide
- Classes are interactive – graphics, exercises, real-world scenarios
