

## Who We Are

Leveraging Technology helps customers maximize business value from their information technology investments.

- IBM Premier Partner and accomplished systems middleware integrators and architects, founded in 1998.
- Customers in health care, insurance, banking, retail and manufacturing.
- Average client retained 7+ years.
- Over 130 technical certifications.

## Our Mission

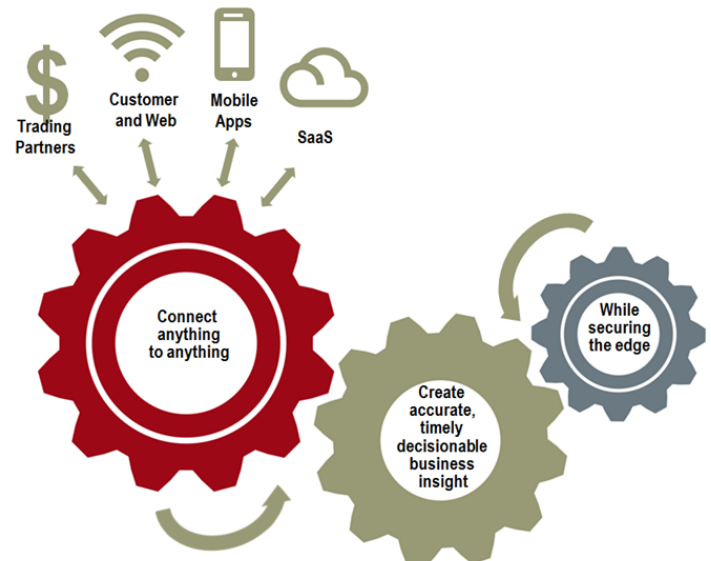

We help customers simplify, innovate and better enable their organizations by removing complexity through creative design linking their systems of record, engagement and insight.

## What We Do: Connect - Create Business Insight - Secure

We couple our **Enterprise Architecture** expertise with a deep understanding of complex **Integration** to improve agility, flexibility and acceleration – and impact business performance.

We work with companies who need to:

- Connect anything-to-anything whether in the cloud, on premise, through mobile or web or with internal or external trading partners.
- Use data to derive accurate, timely, decisionable, business insight.
- Ensure that the enterprise edge zone is secure from inside or outside threats and that company and customer data is protected.

## Why Work With Us

No technologies are used in isolation, so our depth and breadth of experience combined with an architecture mindset enable us to connect the dots in an overall solution.

In the time it would take a client to create one solution to one problem, we create new, comprehensive, repeatable patterns. We do this by “leveraging” our 17 years of experience creating and evolving patterns and frameworks to support IT architecture, such as our Integration Framework and Edge Gateway Design.

## Areas of Expertise

Our staff has extensive experience in both the technologies and the business areas that clients require. We may manage the project and team or augment a client’s internal team. We are frequently sought after to fill roles with these specific skills and areas of expertise:

Role Performed	Description	Typical Experience
Requirements Analyst	<ul style="list-style-type: none"> <li>Facilitate technical requirement sessions and effectively communicate and document the business intent to the solution design team to ensure the end-to-end components, process and design meets business requirements.</li> </ul>	5-10 years business experience; 3+ years at Leveraging Technology (LT)
Business Analyst	<ul style="list-style-type: none"> <li>Conduct business and data analysis to achieve a shared understanding of a current state system, of proposed solutions and provide gap analysis on future state, with use case development as appropriate.</li> <li>Business Modeling with WebSphere Business Modeler and Microsoft Visio.</li> <li>Document future state business processes and architectural artifacts such as for plan management, enrollment, billing, claims processing and financial management in line with corporate strategic goals.</li> </ul>	5-10 yrs business experience; 3+ yrs at LT
